OPERATING CONDITIONS

2% to 10% (volume) - the dilution will depend upon the soils involved. The rate at which soils, and oxides are removed can be affected by build-up of other metallic salts in the working solutions. This may be compensated for to some extent by increasing the temperature and or the solution concentration.

Temperature..... room to 170 °F (77 °C)

Used as a *burnish compound or in an oblique barrel operation* a concentration of 2 to 5% by volume is recommended. For the removal of heavier oxides concentration of 5 to 10% by volume may be required.

Equipment stainless steel, polypropylene, polyethylene
..... Fiberglass or rubber lined tanks
Heater.....stainless steel or nickel-plated steel piping
